NURSERY STOCK OF DISTINCTION COMPLETE LANDSCAPE DEPARTMENT

GENERAL INFORMATION—

Please Read Carefully — It Will Help Us To Serve You Better

HOW TO ORDER. Please order early. Be sure to always write or print your name and address plainly. Give Post Office, County and State, and do this every time you write. List varieties and sizes of Nursery stock exactly as printed in the catalog. State how the goods are to be shipped, whether by mail, express or freight, and to what point goods are to be sent. Keep a correct copy of the order and check off the items when they arrive. Ladies will please oblige us by prefixing their names with "Miss" or "Mrs." as the case may be.

SUBSTITUTION. It is our custom should the supply of a variety become exhausted, which occasionally occurs in all nurseries, to substitute in its stead a similar sort, properly labeled. If you prefer not to have us do this, write "No Substitution" on your order.

PACKING. All orders are packed with the utmost care and as lightly as possible thereby reducing the expense of transportation to a minimum. All goods at prices quoted are packed free. Everything is labeled.

SHIPPING. We are located on the Western Maryland Railroad which has prompt connection with the Pennsylvania R. R., the Baltimore and Ohio R. R., and the Norfolk and Western R. R. Truck Transportation Companies and Through Bus Lines pass our office on regular schedules. Our shipping

season for spring begins about March 1st and continues until the last of June; our fall season begins about August 20th and continues until the ground is frozen, oft-times until after Christmas.

TRUCK DELIVERY. We can frequently make deliveries with our trucks by special arrangements.

SHIPMENTS BY PARCEL POST. Many of the smaller sized deciduous plants can be shipped to advantage by parcel post. Usually, plants should not be more than three feet in height for parcel post shipments.

TERMS. Payment should be made at time of ordering or before shipment, when ordered direct from the Nursery. If order is placed with one of our bonafide salesmen payment should be made on delivery unless otherwise agreed. We prefer to make no shipment C. O. D., but will, when requested ship in this way, provided twenty-five per cent of the amount of an order is sent with the order, with return charges added. Kindly remit by Postal Money Order, Registered Letter, Draft, Express Money Order or personal check. Please do not ask us to open accounts for less than \$10.00 orders. **Prices in this catalog cancel previous quotations.** We reserve the right to change prices without notice. No change or countermands of an order may be considered finally without our written consent.

CLAIMS AND ADJUSTMENTS. Any error or omission on our part will be satisfactorily adjusted if notification is given within five days from receipt of goods. Damages in transit should be taken up immediately with your Express or Freight Agent; advise us at the same time which will help us to help you.

GUARANTEE. All stock is guaranteed to reach you in good condition. In most cases the success or failure of growth depends in a large degree on the care and treatment of the stock after it is received by the customer. Remember, a tree, shrub or plant is a living organism as much as any animal or person. It breathes, drinks and feeds and is liable to attacks of disease and insects; therefore, it is humanly impossible for us to guarantee growth or to be responsible for stock after it is delivered to our customers in good condition. The greatest care is exercised to keep our stock clean and true to name, and while we hold ourselves in readiness, on proper proof, to replace free of charge all trees, etc., that may prove otherwise, or refund the amount paid, we give no warranty, expressed or implied, as to description, quality, productiveness or any other matter of any Nursery stock, seeds, bulbs or plants we sell. A Maryland State Certificate of Inspection is attached to each shipment.

STOCK SPECIALLY SELECTED by the customers at the Nurseries will be charged for according to the value of the plant material chosen irrespective of list price.

Keep plants and trees watered well during dry seasons, cultivate the ground and keep all weeds hoed out. Give light feedings of well-rotted manure or fertilizer if needed, but do not overdo it.

OUR LOCATION. We are located on Route No. 140, adjoining Westminster, the County Seat of Carroll County, Maryland, and are twenty-eight miles Northwest of Baltimore, Md., and twenty-two miles south of Gettysburg, Penna. Look for our signs, or ask for the location of The Westminster Nurseries.

COMPLETE LANDSCAPE SERVICE

Our Landscape Department is complete and competent. No matter what your problems, write to us. We frequently give adequate landscaping advice by mail; but better still, make an appointment for one of our men to call on you and go over your requirements in person—if necessary, he will draw you an accurate plan which will enable you to easily visualize your particular planting, giving complete estimate of the cost.

This service is without obligation to you. The plans drawn by us are the property of The Westminster Nurseries until the client places with us his order for the plant material or work called for on the plan, after which the plan becomes the sole property of the client.

Special arrangements are made with those who are at very distant points from Westminster. Appointments can be made by your personal visit, by letter, or by telephone, "Westminster 222."

LARGE TREE MOVING

Our fleet of trucks, equipped with powerful motor-driven winches, make large tree moving easy and safe. The trees are dug in such a manner that the important roots are not the least disturbed or removed from the earth in which they were growing. The trees are quickly transported to their new location and continue to grow and live as if they had not been moved at all.

Our Large Tree Moving Department has grown to be one of our most important departments. Naturally, thorough knowledge and understanding of the work, coupled with modern equipment and competent men, account for the continued success of this department.

Let us give you our estimate on moving large Shade Trees, Evergreens, Boxwood, etc. Often a favorite tree outgrows its location; or immediate landscape effect might be desired—whatever the case, we can serve you satisfactorily at low cost.

LARGE TREES

We can supply large, developed trees in most of the standard varieties of Shade Trees, Evergreen and Fruit Trees. Let us give you our quotations on large trees.

EVERGREENS

Our experience proves to us that Evergreens handled this way (B&B) can be planted as soon as the frost leaves the ground in spring and up until the ground is frozen again in the fall or early winter.

When planting Evergreens, dig the hole eight to ten inches larger than the ball, and about one inch deeper; the burlap should be loosened and laid down in the hole or removed if possible to do so without breaking the soil from the roots. Step back and see if the plant is straight and placed to the best advantage in relation to other plants and surroundings. Now fill the hole almost full of soil, pack firmly, and then fill with water. After the water has soaked down fill completely with soil and tramp it down until it is firm and level.

Our Evergreens are all carefully grown, well-spaced for symmetrical development, are root and top-pruned into shapely, compact plants. Most all Evergreens have to be sheared to develop into specimens, especially those used in foundation plantings.

PLEASE NOTE: Following the name of a variety the matured height in feet and inches is stated.

TRI-GEN

The all-purpose spray

A POSITIVE PLANT PROTECTION

This complete Rose Garden Spray Treat-
ment—Tri-ogen—offers the first definite
mildew and black spot control combined
with an insecticide. It kills all insects, in-
cluding the sucking and leaf-eating types.
It remains on foliage, repelling subsequent
attacks.

Tri-ogen also stimulates plant growth re-
sulting in fine foliage and luxuriant blooms.

Orchard and Small Fruit Planting Suggestions

Apple orchards are usually planned in such a manner that the "permanent" trees are set at the proper distances required when they are fully grown and developed; "filler" trees are set between the permanents and can be removed as the permanent trees develop. Usually the filler trees are chosen for their compact growth and early fruiting habit, thus giving the orchardist an early income; the permanent varieties are usually chosen because of their larger, more spreading and later fruiting habits. All varieties of peach trees make excellent fillers.

The following diagrams are ideal orchard plans:

SQUARE PLAN for Setting Orchard.

Open circle represents permanents, 40 feet apart; and dot fillers, 20 feet apart. The latter to be removed in twenty years. These are distances adopted by most planters.

TRIANGULAR PLAN for Setting Orchard.

A permanent set, 40 feet apart; C and B fillers, 20 feet apart. C fillers to be removed in fifteen years; B fillers to be removed in twenty-five years. These are distances adopted by most planters.
